

Mobile critical patients initial treatment system

- Advanced mobile medical system, can make critical ill patients get timely initial medical aids, no matter where he is from, no matter whether there is experienced medical staff.
- Equipped with advanced remote Medical Consultation and Diagnostic system, even in harsh conditions, the real-time dynamic and static image and bidirectional audio transmission can be done successfully, the real-time patients' information can be transmitted to experts and experienced doctors who are in hospitals, with the correct diagnosis and first aid instruction from them, the critical ill patients can get timely treatment in rural or field area, people's life can be saved maximally.
- It is also can be integrated into one mobile medical system as very important modular.
- Two parts in this system:

1. Antenna Module

It mainly includes mobile telecommunications antenna systems, laser inertial navigation system, super-quiet generators, and it provides an exchange platform from hospital to rural area.

2. Multifunction medical treatment module

It mainly includes oxygen cylinders, IV stand, first aid kit, defibrillator, monitor, the military standardized stretcher, X-ray film viewer etc, By the real-time collection and transmission of patients' data to the experts and experienced doctors in hospitals, the initial first aid treatment can be done here.

Note:

This mobile system can be designed and constructed specially against your request, make the all of the function fully suitable for your demand and local environment.
