

Remote Mobile Medical Consultation & Diagnostic system

- This mobile system can go to anywhere, and can connect the City medical wireless IT system in rural area. It is one of advanced remote first aid consultation mobile platform, the real-time video (dynamic and static images) and audio bidirectional transmission from City to rural area can be realized. With this system, the experts and experience doctors who are far away from the rural area can provide the timely medical aids to the patients in these areas, especially for the critical ill patients at the early stage of medical treatment. It is more suitable for the rural area where there are no experienced doctors locally.
- This mobile system equipped with satellite communications system, video system and the necessary medical equipments and facilities, it mainly consist of satellite antenna, transceiver equipment (ODU), modems, industrial control computers, decoders, CCD camera, digital camera, a standard rack, multifunctional worktable, two 20-inch high-resolution monitor and generator compartment etc.

Note:

This mobile system can be designed and constructed specially against your request, make the all of the function fully suitable for your demand and local environment.
